BikerBed Installation

Tools Required

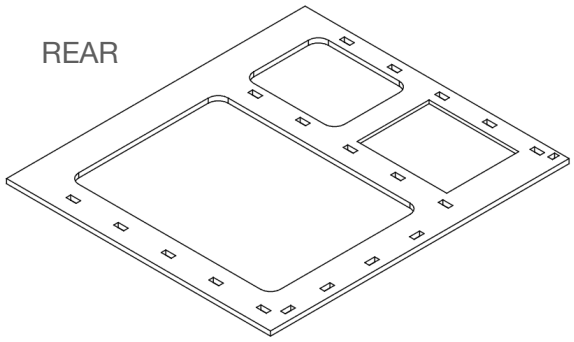

- Electric screwdriver with **Allen (hex) bits**, or a standard bike multitool

DO NOT use an impact driver.

Installation Steps

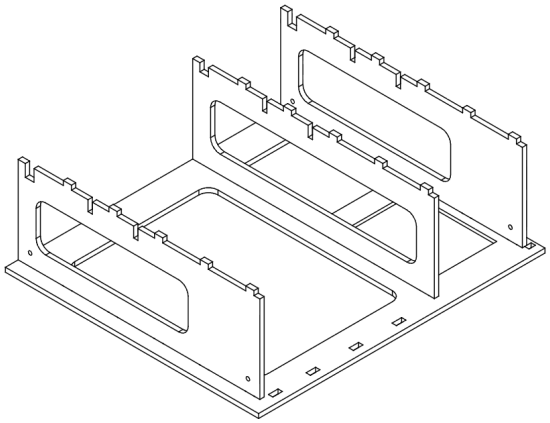

1. Position the Base

Place the base roughly on the van floor, with the **edge that has no slots facing the rear** of the vehicle. Ensure the **Hex-Grip finish is facing upwards**.

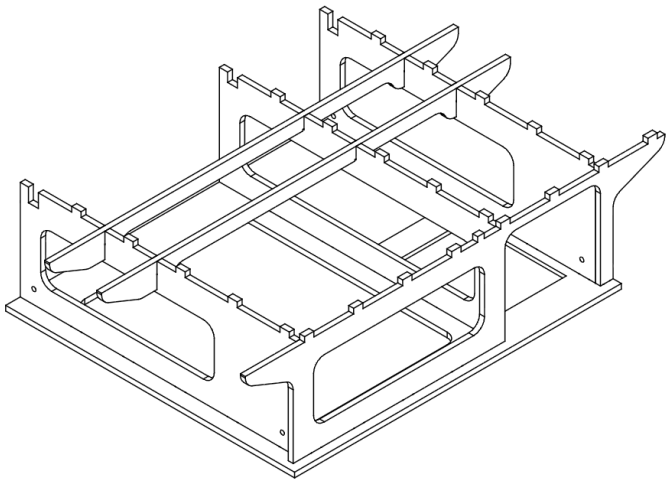

2. Install Side Panels and Divider

Insert the side panels and divider, ensuring their orientation matches the diagram provided.

3. Install the Front Panel

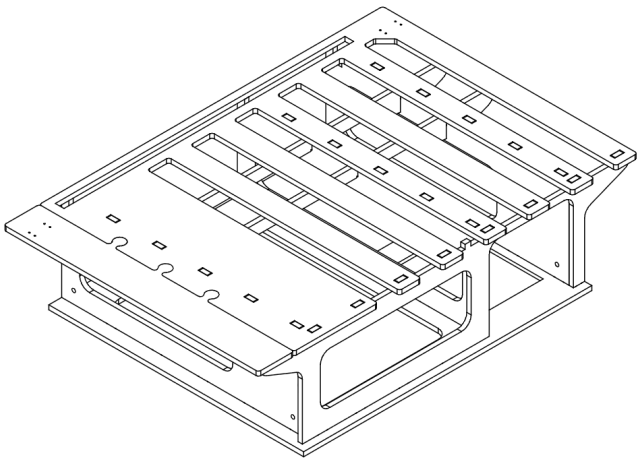

Insert the front panel and slot the **two ribs** fully into place.

4. Fit the Top Piece(s)

Place the large top piece into position.

- **Pre-2026 models:** The smaller edge piece can also be slotted into place as shown in the diagram.
- **2026+ models:** The separate top pieces are replaced by a **single hinged top panel**. Once placed, unfold the panel.

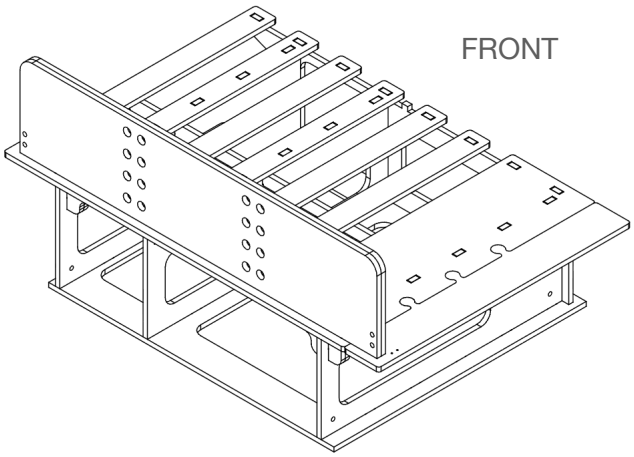

5. Install the Headboards

Slot the headboards into place, ensuring:

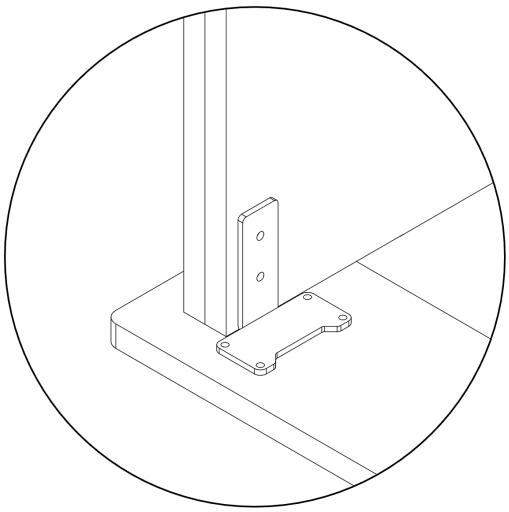

- The **Hex-Grip finish faces outwards**
- The headboard with the **larger-diameter holes is positioned at the rear**

💡 This step is easiest when performed from a standing position at the rear of the vehicle.

6. Secure the Brackets

Using a **4 mm Allen key**, secure the brackets as shown in the diagram using the **6 provided screws**. These should be finger tight.

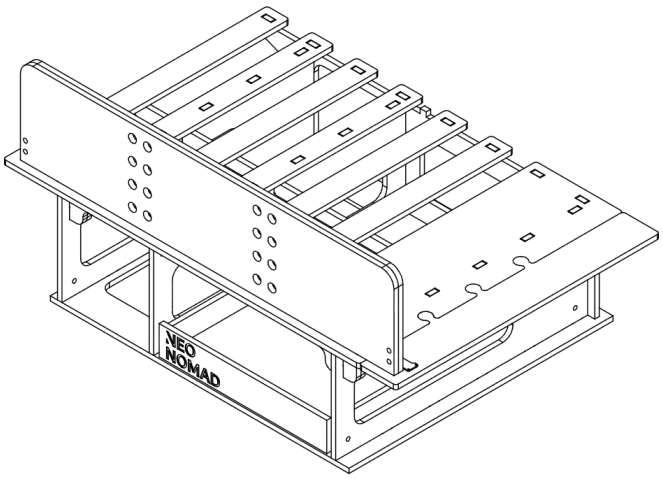

7. Install the Drawer

Move to the rear of the BikerBed.

The drawer slides are pre-installed for your convenience.

1. Move the **metal retainer** to the front of the slide member attached to the BikerBed.
2. On the drawer, **hold the blue lock button** and carefully insert the drawer into the slides.
3. Push the drawer closed until it **clicks into place**.

⚠️ You should not need to force the drawer. If you encounter resistance, check alignment on both sides and try again.

✔️ Verify that the drawer:

- Slides freely
- Locks securely in both the **fully closed** and **fully open** positions

8. Install the Bike Racks

While still at the rear of the vehicle, select the headboard mounting points you wish to use.

💡 We recommend using the **highest possible mounting points** to prevent pedals from catching on items stored in the drawer.

- Attach the racks using the **provided screws (finger-tight only)**
- Ensure the rack **support piece points downward** and is correctly seated in its slot
- Fit the **protective covers** over the support pieces

9. Secure the BikerBed to the Van

Move to the inside or side door of the van.

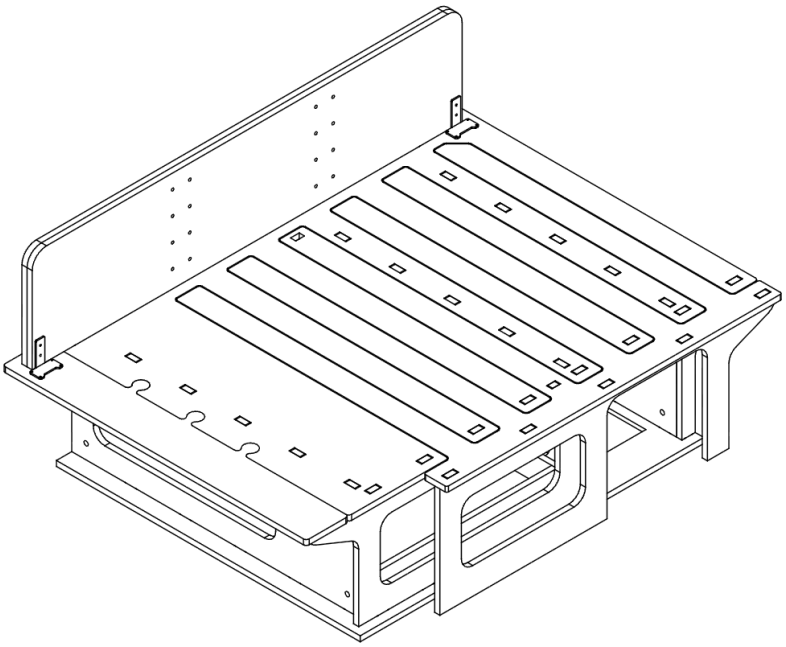

Using the **ratchet strap**, secure the BikerBed to the van's cargo tie-down points:

- Loop the strap over the **vertical panels** of the BikerBed
- Tighten until secure, but **do not over tighten or crush the panels**

10. Install the Sliding Bed Top

Finally, place the **sliding bed top and support** into position.

The slots in the top of the middle beam can be used to **secure the bed in either the extended or collapsed position**.

11. Go on an adventure

Load up your bike, and put your BikerBed to good use. Enjoy!
